Insomnia

I used to prescribe Opium 200 when the patients feel that complaints are worse due to loss of sleep and also in insomnia cases. It has helped me in many insomnia cases where Plassiflora fails.

Diarrhoea

Opium is a very good medicine for diarrhoea; it is helpful in when the indicated remedy fails. My experience is with 3x potency in many cases. Other common symptoms of Opium like drowsiness is attributed with semi droopy eyes, Painless loose stool with, involuntary defecation reflex shall accompany the main symptom.

Balanitis

A 23 years old boy was brought to me for involuntary urination and defecation since one month. Local examination of glans penis showed ulceration and raw. He had ulceration in mouth for the past one month. He dislikes bathing. He also had pain in throat while swallowing with increased thirst. The boy is loquacious and stealing things from home. Opium 30 C was prescribed and was all right within 3 months.

Ailment after fright

A nine years old male child consulted me for high grade fever 104°-105°F since 3 days no other accompanying symptoms. The child is very bold, active, and intelligent but suddenly he was dull and sluggish so Gelsemium was given but no relief, after reviewing of the case history taken from mother, she told that fifteen days back patient has seen a major accident. After that he was dull, screams and avoided to go to roadside. This probed me to prescribe Opium 1m single dose, on the basis of impression of fear of an accident. To my surprise it gave him amazing result.
